THE STAR ROUTE SCHEMES.

A FIRST STEP TOWARD CURTAILING MR. BRADY'S EXPENDITURES.

Long and Interesting Debate in the House—Brady's Practices Denounced by Men of his Own Party—Information Concerning the Post Office Department Withheld by Key.

WASHINGTON, Feb. 26.—The Post Office Ring and Lobbyists met with a Waterloo defeat in the House, by an overwhelming majority, has set the seal of condemnation upon the corrupt administration of the Post Office Department as the initial step in reforming a great evil. It is true that $1,070,000 was appropriated, but its expenditure is so carefully restricted that a very considerable proportion of this amount must be saved. All the pay for increased speed, save a fractional amount, is lopped off, and the excessive pay allowed for additional trips will have to be reduced. A section of the bill, moreover, allows only $100,000 for increases hereafter, and in accordance with the terms of the first section; but the speed work does not stop here. The allowances for speed this, as was clearly demonstrated in debate to-day, were obtained by fraudulent representation and by collusion with the department, and under section 4,057, Revised Statutes, must be said for at once. The law is mandatory, and the proceedings are summary, and if the Postmaster-General does not do his duty, he is liable to be impeached. The debate to-day was interesting and animated.

Mr. Page of California began a defence of the Post Office Department, speaking particularly in behalf of contractors on the large routes in his State—the routes which have been increased over $5,000. Mr. Page called them the grand trunk star routes. The 10,400 smaller routes, which the committee's bill propose to retain intact, were of no importance. He denied that the star service was expensive. It was cheaper now for one than it was fifteen years ago. Mr. Page did not say, however, that where fifteen years ago the star routes passed through a wild, uninhabited country, they now pass over post roads through comparatively settled land. Mr. Page urged that only $107,000 more than appropriated in the committee's bill would be required to keep up the service. He presented a mass of figures given him by Brady this morning to sustain his argument.

Mr. Cannon said that the statement furnished Mr. Page by Brady was a false one. He offered to present a statement made by Brady under oath to contradict the untruthful statement furnished Page, but the Californian declined to receive it.

Mr. Page argued that on each of the 107 routes which the committee proposed to reduce to the original contract price, the department would be required to give the contractors one month's extra pay. This statement was entirely false, as the present contract gives no part of the contract, but simply orders of the department, which may be rescinded without abrogating contracts.

Mr. Berry of California spoke against the bill. It was passed the great route that connected his State with Oregon and carries about [illegible] pounds of mail daily would be cut down from a week. There are fourteen routes in California which would be affected by the passage of the bill, and eight out of those fourteen routes were in his district.

Mr. Hilliard of Colorado said the receipts of the Post Office in Denver for the past three years amounted to several millions of dollars. The receipts from the Leadville office were very large. This bill would cut off the mails from a daily service to a single trip a week. The people of the West were just as much entitled to their regular mails as the people of the East.

Mr. Baker sent to the Clerk's desk a substitute for the bill reported by the committee yesterday, which substitute was agreed to this morning by the Committee on Appropriations.

Enough remains to meet the expenses of inland transportation of mails on star routes for the remainder of the present fiscal year, at and within the contract prices they existed in 1878. It provides that upon star routes there has been an increase of the original contract price during the last or present fiscal year by extensions of the delivery made on any such route at a rate of more than $2,000 a year, the compensation for expediting service on such routes shall be reduced to the rate existing on and after March 1, 1878. Nothing contained herein shall be construed to require the payment of more than a pro rata per mile over such routes below the lowest number during the remainder of the current fiscal year, nor to further expedition of star service beyond the limits of the contract of 1878. The further sum of $100,000 is appropriated to enable the Postmaster-General to pay for service on new routes.

Mr. Baker said that he simply wished to consider the facts regarding the deficiency as they exist, without any reflection on the management of the Post Office Department. To carry on the service at the present rate to the end of the fiscal year $1,700,000 will be required. There were several methods by which the service could be maintained. Congress could accede to the demand of the Post Office Department. It could make a moderate appropriation, say $500,000, and allow the department to run on until the committee could conclude its investigation and report what legislation is necessary to remedy the evils complained of; or Congress can pass the bill reported by the committee yesterday. He objected to that bill, because it put no check upon extravagance. He thought that the people were more particularly interested in the number of mails they received than in the number of hours required to deliver them. The mails after the passage of his bill, would be delivered just as often as they are at present, but a longer time would be required to transport them.

Mr. Hiscock of New York said that he would say to gentlemen who argued that Brady had violated the law that he had misconceived the letter and the spirit of the statutes. He read the sections of the statutes applying to the present case. Would any member of the House say that when a contract is signed for the expenditure of money in excess of an appropriation, the department stipulates for the right to vacate the contract, that a contract had not been entered into? Would any lawyer say that? A simple legal proposition was presented. Since last July the department has made contracts which, if carried out, would create a deficiency. The Government can only be relieved of them by paying the penalty—one month's extra pay to contractors. The Government had been injured. Gentlemen say that the department has not violated the letter or the spirit of the statutes. Mr. Hiscock said that they had.

Mr. Cox of New York gave the facts and figures respecting the star route lettings, which have been printed so often, and he added that Congress was not responsible for this condition of affairs. The department alone was at fault. In his Postmaster-General's report to Congress in December he mentioned that by a change in delivery, save one of $130,000 for service of the preceding year. By law Congress must be furnished every two years with what is known as the Blue Book or official register. It contains a list of all officers in the Government employ. In that book, which should have been furnished members on the first day of the session, there should be published a statement of the entire Post Office machinery. For the first time in the history of the Government the statement of the Post Office Department was deliberately omitted. He would leave the gentlemen who had charge of the bill to explain why holding back the statement of the department's expenditures, every member would have known of the deficiency. Gen. Brady had expended $1,700,000 to run the service as he had stated it until the end of next June. He now said that if the service was to be continued up to that time he must have $500,000 more, or there would be a deficiency of one-third of the amount of the last appropriation. He asked the members of the Appropriations Committee to agree to pass an investigation. They had [illegible] their inquiry, and had not yet reached the testimony taken by them could not be referred to on the floor of the House. In a newspaper interview, which he would ask to have inserted in his remarks, he attributed the Second Assistant Postmaster-General to the fact that he had said that Congress had the law, to spend the entire appropriation for star service in thirty days. [illegible] Brady's violations of the law. A clerk in a department is dismissed by Congress with the minute details of his offence. A clerk had previously stricken the amnesty of the House by [illegible] and thousands of the destitute on the pension rolls. Had it come to this, that Congress was the slave of a Post Office clerk? Mr. Hiscock knew the bill would be passed. Every member knew the abuses in the Post Office swindles. The contractors' lions were fully fed. They would take routes at a loss, knowing that the pay would be forthcoming. No honest man would compete against them. The contract system was a disgrace and a shame to our Government. The House might stand when he could explain its inmost working to the House.

Mr. Bland of Missouri made his maiden speech in favor of the bill, and Mr. Conger opposed it. The latter thought that Democrats were trying to make a party fight against the Republicans.

Mr. Page offered as an amendment to the first section of the bill originally reported a substitute providing that Brady be given enough money to continue the service at the present contract prices until the end of the fiscal year. This amendment, if adopted, would give Brady all the money he desired, and be a complete victory for the contractors' Ring.

Mr. Blount offered as a substitute for the first section of the original bill the first section of Mr. Baker's bill, published above. He explained the reasons which induced the Committee on Appropriations to offer the substitute.

Mr. Beskell began a series of reminiscences of the postal service under Buchanan. He was interrupted frequently with shouts of "Vote," "Vote," from the Democratic side, whose patience had been exhausted by the feeble defence Brady's champions were making.

Mr. Cox of New York said that his State had no interest in the postal service everywhere. New York pays for her own service and gives a surplus to the other States. She had never been a stingard against the West or the South. He admired the West, the land of sunset laughter, but the South should not be discriminated against. He read a statement showing that the cost of the star service in Nevada, California, Wyoming, Oregon, Colorado, Washington Territory, Idaho, Montana, Dakota, Utah, Indian Territory, New Mexico, and Arizona was $2,424,999, while in all the Southern and Southwestern States the star service was given $1,979,860. He did not want the Post Office Department to legislate for Congress. If department officers did not obey the law he wanted them penitentiarized. He favored any plan to restrict the discretion of the department, and he hoped that the investigation which had been begun would expose all the schemes and jobs in the department. They should be ripped up from the centre to periphery. If the House did not give the country good politics it should give good ethics.

On motion of Mr. Blount, the committee rose for the purpose of concluding debate. The House then went into Committee of the Whole again to consider amendments. Mr. Page's amendment to vote Brady all the money he asked for was first considered. Upon this amendment the contractors' lobby based all its hopes. It was defeated, 119 to 80. This vote was a test of the strength of the friends of Brady.

Mr. Blount's substitute for the first section of the bill originally reported by the committee was adopted on a division. The substitute received 153 votes, and its opponents did not remain upon their feet to be counted. Mr. Blount then moved as a substitute for the second section of the original bill the following:

That the further sum of $100,000 be appropriated to enable the Postmaster-General to place new service as authorized by law.

The committee accepted as an amendment to this section offered by Mr. Dunnell, after the word law, to insert the words "or increase service on existing routes other than those required in the first section of this bill."

Mr. Cannon said that he was a Republican, but he had a voice in making the laws of the country, and he proposed to do his duty. He had heard a great deal about the great West, but he had yet to learn that half a dozen contractors formed the great West.

Mr. McMahon complained that the Democrats, when they proposed to save the country $1,700,000, were not met in the proper spirit by the Republicans.

Mr. Calkins said that the talk about economy in the mail service was all sham. He thought that as long as the members spent thousands of dollars annually in order to have their mails laid upon their desks in the House, they might have some consideration for the people of the West.

Mr. Page wanted Mr. Cannon to understand that when the contractors wanted money they went to the Appropriations Committee to get it, and did not come to unfluential members like himself. He was simply fighting for his own people.

The committee rose, and the bill as amended was reported to the House and passed.

CO-OPERATIVE STORES.

The Introduction of the English System in New York Under Discussion.

A meeting was held in Municipal Hall in Madison avenue, last evening, for the purpose of discussing the question of introducing in this country the English system of coöperation among the working classes, or such other system as promises to reach the object desired. That object is to enable the working classes to purchase nearly all the daily necessaries of life at first cost price, and to give them an opportunity to save something besides. The meeting was held in response to a call signed by Parkes Godwin, Joseph W. Drexel, J. Wheeler, Willy Wallach, H. E. Pellew, Charles L. Brace, James Gallatin, S. Hodgson, J. P. Cranford, Edwin L. Godkin, E. A Washburn, W. M. Taylor, J. H. Kramer, E. H. Chapin, R. Heber Newton, J. H. Rylance, Robert Collyer, Henry C. Potter, Benj. B. Sherman, Livingston Roe, Edgar W. Crowell, W. H. Sage, E. E. Barnum, John Gledhill, George W. McWaters, Edward Bleecher, Fred. Law Olmstead, Bradford Rhodes, Felix Adler, E. V. Smalley, D. G. Croly, C. W. L. Marples, Samuel Morphis, and W. P. Libby.

Most of these gentlemen were present, and made short speeches.

Several Englishmen who have been engaged in the coöperative system adopted in England and Scotland explained the workings of that system. It was thought, however, that the English system would have to be modified somewhat before it could be successfully adapted to the wants of more than $2,000 a year, the amount allowed by law to be expended for a building in which to sell goods. Such stores would be required to be located in the immediate vicinity of the population to be benefited, and under Section 4,058 Revised Statutes, no more than $2,000 a year could be expended for a building. The Postmaster-General would be compelled to remove the postoffice in any city over such routes below the lowest number during the remainder of the current fiscal year, so as to prevent expedition of star service beyond the limits of the contract of 1878. The further sum of $100,000 is appropriated to enable the Postmaster-General to pay for service on new routes.

Several Englishmen who have been engaged in the coöperative system adopted in England and Scotland explained the workings of that system. THE GAME OF FIFTEEN.

A PUZZLE OVER WHICH PERSONS ARE SAID TO HAVE GONE CRAZY.

Invented by a Deaf Mute who did not Know its Commercial Value—Ravaging Boston and Invading the Metropolis—A Calculation.

A deaf mute in Hartford, Conn., is said to have invented the notorious game of fifteen. Among all those engaged in the manufacture and sale of the puzzle, this story of its origin is current. The deaf mute's name is apparently unknown to any one here. D. P. Maguire, the Boston newspaper man, who introduced the game in this city, knows the most about it, and he credits the story. Two ladies that knew the inventor were astounded at the sensation the toy created in Boston. They told Mr. Maguire that the deaf mute cut out a few sets of the wooden blocks and distributed them among his friends as gifts. A Mr. Rice, a wood turner, in Wareham street, Boston, himself an invalid, began the manufacture of the numbered wooden lozenges on a large scale. To the minds of the Bostonians there was something more than a mere puzzle in the game; it was a mathematical study, and its solution a science. Mr. Rice made an elaborate apparatus. The cardboard box containing the blocks was lined with dark hard wood. The lozenges were squares of stained wood and bevelled. They sold for half a dollar. The inventor did not patent the puzzle; nor did Mr. Rice. Thus it was that Mr. Maguire entered the field. He employed wood turners, printers, and paper-box manufacturers. Machines especially designed for making the puzzle were built, and a puzzle was produced that could be profitably sold for a quarter of a dollar. Boston took up the puzzle greedily, and the same popularity that has since been accorded it here was speedily developed there. Now there are many manufacturers of it in Boston.

In New York and its suburbs the Boston people carried the puzzle to the stores, depots, ferry houses and hotels, often leaving samples against the wishes of the salesmen, who perceived no merit at all in it. Directly it leaped into favor. To-day the men who sell it make the down-town streets noisy with their cries. It is worked upon and talked about everywhere. It is regarded as a nuisance in public schools, and as a source of joy in boarding houses. In the legislative halls at Albany, it is said, the people's representatives study its mysteries upon their desks. Mathematicians vie with each other in gigantic equations arising from it, and THE SUN receives daily a bushel of inquiries from persons who want to know a certain plan for its solution. Reporters, in their travels through the neighboring cities, report a similar condition of the public mind. Wherever they go, the game is the topic of conversation outside the Ring. If the puzzle is more expensive at a distance from them.

There are three large dealers in this toy in New York. The members of a John street firm say they found a growing demand for a mysterious puzzle that was variously called the Boss, the Gem, the Rattler, the Boss, the Solitaire, the Buttercup, the Game of Fifteen, and by other names. They traced the game to Boston, procured a sample, and ordered 100 gross. After the goods were received the dealers were startled. They started the attention of street peddlers to the thing, and presently their store was thronged as never before. The sales averaged fifteen gross a day. They began to manufacture the game for themselves, and even now the sales keep the workmen busy. These dealers say that they have heard of a German tailor in Troy who purchased the puzzle, trifled with it, became enshared by it, sat up all night over it, threw it away, gathered its pieces, and the next morning adorned his shop window with a placard offering a reward of $50 to any man who would teach him a solution. They also tell of an Albany man who was belated at supper time, and who hurried home to find no preparation for supper, the fire out, the children roaming the house, and his wife locked in an upper room, poring over the fifteen blocks, which she purchased of a peddler, who rattled the numbers into consecutive order, to show how easy it was.

A Broadway firm of dealers in five and tenpenny goods sold 230 gross of this puzzle in one day. A member of the firm invented a new form of this puzzle:

L	I	T	T
L	E	B	U
T	I	E	R
C	U	P	S

He sent it out to dealers who ordered assortments of cheap goods. Nothing was heard from it for a time. Suddenly from Chicago, in holiday time, came a flood of orders. The numerical puzzle was not yet known—that is, not yet in vogue there. The puzzle is utilized for advertising. A New York transportation company has ordered boxes of blocks, which, when properly arranged, will spell the name of the company. A sewing machine company has utilized it in the same manner. It is said that an up-town firm of jewelers has ordered 1,000 of the puzzles made of ivory and inclosed in fancy boxes. They are to retail for $4 apiece. Another firm is having the puzzle made in glass, with the numbers ground upon the faces of the blocks. These are to sell for 25 cents.

The puzzle consists of a square box, into which are fitted 15 wooden squares, numbered consecutively from 1 to 15. There is room for four rows of four in a row. The absence of the sixteenth block in the box affords room for the movement of the others. The game is to disarrange the blocks and then to bring the numbers into consecutive order by shoving them into place without lifting one off the bottom of the box. The intricacies of this apparently simple exercise are startling. A mathematician who reported the result of his calculations in THE SUN wrote that the number of possible movements is "nearly 1,000,000,000." There are said to be a number of combinations that are either very difficult of solution or, as some believe, impossible. One dealer solemnly assured the SUN reporter that two unfortunate men in Boston who encountered these combinations are now insane and in an asylum. He says that a Mr. J. F. Rassen of 237 Pearl street offers $100 to any one who will extricate him from the tangle in which he became involved when he found the blocks in this order:

1	2	3	4
5	6	7	8
9	10	11	12
13	15	14	

The same dealer says that this is the combination that most frequently causes trouble. He says that he receives great numbers of letters from persons who want to know whether this combination can be accomplished. He says he never tried it, but it was accidental, and he could not recall the previous moves. He was awakened at 2 o'clock on Sunday morning by the clerk of the hotel in which he is living. The clerk said he had solved the problem and could do it again. Three or four of the boarders sat up during the rest of the night to see it done, but the clerk disappointed them. A broker who solved the problem ventured a heavy wager that he could repeat the solution. He lost, became hopelessly confused, and finally went to a manufacturer of the puzzle and offered him a handsome sum for the solution, saying that he could win his money back ten times over if he knew the method. A Boston man advertises to send the solution for two three-cent stamps. To those who write to him he replies: "Pick up the 15 and put it after the 14." It is said that a conductor on the Boston and Providence railroad was accustomed to work out his problem on the road between Boston and Providence, the 9 follows the 10, with all the other numbers correctly placed. In overcoming the first combination he made 260 moves.

The members of the Academy of Science, at their annual meeting on Monday, discussed the puzzle. They said that the fifteen blocks can be placed in 1,000,000,000 different combinations. "Suppose," said one, "that the blocks be placed on a chess board, on the alternate white and black squares. If the number that should be on a black square is on a white square, the solution by placing them in regular order is impossible. If the number is on a black square it is equalized by a white square number on a black square. Changes between squares of the same color will not bring about a solution."

By adding a sixteenth block, the game of thirty-four or the game of sixteen is produced. The object of the player is to so arrange the blocks that the sum of their numbers will be thirty-four when added horizontally, perpendicularly, or diagonally. The blocks may be taken out and changed in whatever manner the player chooses. This is the solution:

1	15	14	4
12	6	7	9
8	10	11	5
13	3	2	16

This puzzle is not new. On the library ceiling in what is called the "Castle," at the Schuylkill Park on Bergen Heights, the puzzle is in fresco. It is over the head of whoever lies on the lounge near the library window, and it is a favorite amusement of visitors there to lie and study it. Not only is the sum of 34 arrived at in all the lines diagonal, as well as horizontal and perpendicular, but in the sum of each of the sets of four numbers composing the four corners, of the corner numbers themselves, and, in fact, of every four numbers that form smaller squares within the main square.

A Child's Suicide.

POUGHKEEPSIE, Feb. 26.—Sarah Alice Weaver, 13 years old, had been living with her aunt since her mother's death, eight years ago. Two weeks ago her aunt told her that she could not support her longer; that she must go to live with her father and stepmother. Last week the girl bought five cents' worth of arsenic. On Tuesday last she was taken sick and she died at midnight. The coroner showed that she had taken enough poison to kill twenty persons. On the day before the girl was sent to her father's house she dropped a note addressed to her father on the floor. Her aunt picked it up, and found the following written on it:

MY DEAR AUNT: When you find this I will be no more, through no wrong or fault of my father. I have given you trouble enough. With love to all, I can say weep not for me when you stand round my grave. No more. Your niece,

ALICE.

A Sure Remedy for Lung Diseases

And symptoms of consumption is Phillips' "Palatable" Cod Liver Oil, in combination with Phospho Salvitae. Astonishing results. All druggists. Depot, 2 Platt st., N. Y.—dis.

Lizzie O'Brien's Father.

Lizzie O'Brien, a pale-faced, intelligent-looking girl of 16, charged her father, in the Essex Market Police Court yesterday, with robbing her of all her clothes to obtain drink. John O'Brien, a stalwart man, glared at the Judge and his daughter. He carried a bundle of clothes.

Lizzie said the man had been supported by her and her brother. It was hard to appeal against her father, but he had taken everything from his children. The very bonnet he then had in his arms was her crook and dress, and this he was on the way to pawn for rum. "Are you not a more inhuman than a brute," remarked Justice Smith, as he sentenced John O'Brien to three months' imprisonment.

Killed by a Vicious Horse.

FLUSHING, L. I., Feb. 26.—Mr. J. A. Ranelye, a farmer of this place, died to-day from injuries suffered by being trampled upon by a vicious horse owned by him, and which he was attempting to harness yesterday.

ENGINEER MOORE'S ACCOUNT

Of What was Done an Hour Before the Fatal Broadway Fire Last Friday.

Just after the discovery of the fire last Friday evening at 386 Broadway, where Fireman Cassidy and Dougherty lost their lives, the engineer, John H. Moore, was narrowly rescued through a rear door which had been locked in order of the firm, and of which he did not have the key. Yesterday he told Fire Marshal Seldon a story which the Fire Marshal thinks goes very far to explain the cause of the fire and the suddenness with which it gained headway. The firemen are convinced that the orgin of the fire was in the front part of the store, because when they first arrived the heat was especially severe at that point. Engineer Moore explained that his boiler room was under the sidewalk of Cortlandt alley, in the rear of the store. "I first noticed," the witness continued, "a kind of haze floating around. I was then in the engine room. I smelled something like burned coke. The haze got thicker, and then cleared up. I was satisfied that something was wrong. I entered the cellar, taking a hammer with me, intending to break the steampipe at the elbow and let the steam into the cellar, thinking it might check the fire. I had got in about eight feet when I met a volume of hot air, so hot I could go no further. I could see no fire. Everything was dark, but I heard a roaring noise, like a strong current of air. I dropped on my hands and knees and got back to the boiler room door. The draught of air had closed it. With some effort I got it open, and went into the boiler room. I then went up my rear stairs to the grating. The other stairs were in the front of the store. I broke off the locks of the sheet-iron door, and with the help of one of the chiefs of the Fire Department and of a policeman I got the door open. We had two gas meters in the cellar, one on top of the other, they were about ten or twelve feet from the front wall of the area way against the south wall.

"The gas pipes entered the basement and turned down to the cellar. Some three days before the fire complaint was made that the gas was leaking. I examined the pipes. The smell of gas was very strong. I found the connections not screwed up. I got two turns and a half on one coupling, and on the other one turn and a half. I then examined the connection outside the T. I put my lighter to it and got a light as big as a six-feet burner. The thread of the pipe was just caught and was crossed at that. There was about an inch and an eighth of the thread in sight. I putted it up temporarily and sent to the gas company. The gas fitters, Tremain and Hall, were sent for, and they finished all the pipes the day of the fire at 7 o'clock. I saw nothing of them until about a quarter past 5 o'clock in the afternoon. I did not know they were in the building until one of them came to me and said they had got the work done. I went and examined it. The connection with the T was smeared over thick with white lead. I objected to this, and said there was no need of the lead if the work was properly done. They said it was right. I then examined all the pipes, and there were no leaks. I do not think they could have done the job properly without shutting off the gas, which was not done. I think the fire was caused by that leak in the gas pipe."

The two pipe fitters are to be summoned before the Fire Marshal.

BI-METALLISM IN GERMANY.

A Pamphlet that Re-echoes Bismarck's Sentiments Received by Judge Kelley.

WASHINGTON, Feb. 25.—Representative Kelley received in the mail from Germany, today, a seventy-page pamphlet, entitled "The Gold Standard—Its Causes, Effects, and Future," by Baron von Kandorff, who represented Prince Bismarck in the tariff discussion as leader of the Protestant wing of the Conservative party of the Reichstadt. It is an elaborate defence of bi-metallism on the basis of 15½ to 1. The appearance of the pamphlet is regarded as an expression of the opinion of Prince Bismarck on the subject, as Baron von Kandorff is one of the officials of his party. Accompanying the pamphlet was a letter from another distinguished German writer on finance, with whom Judge Kelley has been in correspondence for many years. The writer is largely engaged in the manufacture of iron, and is President of one of the largest coal companies in Westphalia. He says: "Your latest pamphlet on the subject is just making its round here. Bi-metallism is the order of the day at all public meetings, and I should think that in a couple of months an invitation to an international conference would be issued by public opinion, in this quarter at least.

"That little pamphlet, 'Peel and Cobden,' which also contains your speech on the silver question, will soon require a second edition; and I hope you will translate your paper, 'Bi-metallism,' and some passages of Mr. Cornuschi's pamphlet. I have lately come in contact with rather high personages, at in consequence of that little book, which is daily gaining ground, especially in and out of office men, who begin to see that the coinage of gold and silver is likely to be given free with you. Don't you think that unless silver be restored throughout the world to its money functions, at a fixed rate as compared with gold, say 15½ to 1, the present activity in our mercantile and industrial undertakings would suddenly be likely to be followed by a reaction, if not disaster? Things have taken a turn to the better here; but, as far as I can see, it is but in consequence of American orders, and I have prophesied that American orders will be stopped, as soon as the United States can supply the home demand, which will be question of time, and a short one, too."

HARD FIGHTING WITH GLOVES.

Colored Champions of New York and England in a Desperate Battle.

The admirers of pugilism gathered in force, in a Houston street resort, yesterday, to see the glove fight between the giant colored champions, Morris Grant of New York and Dangerous Jack of England. Grant stands 5 feet 11 inches and weighs 180 pounds. Watson stands 5 feet 10½ inches and weighs 186 pounds. Grant was the first to enter the ring, and was greeted with loud cheers. A few seconds later Watson followed, and he, also, was received with applause. Both men were dressed in full ring costume. Henry Hill was master of ceremonies, and soon called time. After a little cautious sparring around the stage both men went at it in earnest. Grant, who was in the best condition, let fly his right hand on Watson's right eye, and got in another blow on Watson's left. Watson struck Grant in the mouth, and stopped a dangerous counter blow. Grant threw Watson among the wings of the stage, and, contrary to rule of the prize ring, pounded him while down, amid yells and cheers from the crowd. Finally both got up. Grant was first to the mark, and let go right and left, sledge-hammer hits, on Watson's body. The latter countered heavily with his right on Grant's face. Sharp fighting followed for two minutes. Then they clinched, swaying and punching each other all over the stage. Grant's friends cheered, while Watson's friends were in high glee. When Grant threw Watson with a third heavily on the stage and began pounding him on the face and body, the spectators rose to their feet and great excitement prevailed. Some of the sporting men present rushed upon the stage, and it was with difficulty the men could be separated. When on their feet again they glared fiercely at each other, and both wanted to fight it out with their naps flat, rough and tumble. Through the interference of friends on both sides, the men were prevailed upon to quit the stage.

Other exhibitions with the gloves followed, concluding with three lively rounds between John Landers and Mike Coburn.

NEW BANKRUPT LAW.

Some of the Features that it is Proposed to Incorporate in It.

WASHINGTON, Feb. 26.—The sub-committee of the House Committee on the Judiciary, to whom was referred for investigation and report the subject of a national bankrupt law, gave a hearing today to a delegation of Baltimore merchants, who expressed their desire to emphasize the efforts of trade representatives of Boston and New York looking to the passage of a National bankrupt law by Congress. The only suggestions made this morning as to the features of the proposed law were that it should be, as compared with the former law, more stable in its machinery, more uniform in its operation, and less expensive to those availing themselves of its provisions; also, that certain acts should be made to constitute a prima facie case of fraud, and that the burden of proof should be changed from the creditor to the debtor. The subject of homestead exemptions was discussed and the point made that in many States the exemption covered so large an amount that creditors were virtually powerless to collect debts.

Edward R. Stoutenburgh in Jail.

Edward R. Stoutenburgh, who was on Tuesday convicted in the Court of Quarter Sessions, Newark, on a charge of embezzling a $1,500 diamond from a ring owned by Mrs. Margaret Hedges, Lovett of West orange, was committed to the Essex County Jail yesterday by Judge Depue. Mr. Stoutenburgh had promised that if he be allowed to remain at home until the 15th inst. he would surrender himself to the Sheriff. Yesterday he was informed that he must go to jail. Judge Depue said he would release Mr. Stoutenburgh on bail if he would surrender himself to the Sheriff to-day. Judge Depue instructed the Sheriff to arrest Stoutenburgh if he did not do so. The officer accordingly went to his residence and arrested him. Stoutenburgh was much affected by his arrest. He is a well known furniture dealer, not a clothing merchant as has been reported.

Killed by a Falling Tree.

WOODMANSIE, N. J., Feb. 26.—As Myron Cummings, a well known resident of this place, was leaving this morning for a place where some wood-choppers were at work felling trees, a large tree fell and struck the road, killing Mr. Cummings and one of his horses.

Fine Silk Hats, $3.25; worth $5; noble Derbys, $1.90; worth $3. 10 New Church st., by stairs.—dis.

FIREMEN AGAIN IN PERIL.

RETREATING FROM A WOODEN BRIDGE ONLY JUST IN TIME.

Flames Destroying an Elizabeth Street Foundry that was Surrounded by Tenements—Excitement Among the Escaping Tenants.

Watchman Philip Isterling, a little before 6 A. M. yesterday, went into the rear five-story building at 87 and 89 Elizabeth street, to build the fires under the 100-horse power engine that supplies power for that and two adjacent buildings, when he fancied that he smelled smoke as though the building was burning. He decided that it was a fancy, and he built the fire under the boilers. On his way to the outer door he smelled smoke again, and on opening a door on the first floor saw that the interior was in a flame. Just beyond, and adjoining the building, were tenement houses with windows opening within two feet of the building that was on fire. The burning building was completely surrounded by machine shops and tenements. The only approach to it was on a bridge fifty feet long connecting the rear building with that fronting on Elizabeth street. The watchman gave an alarm, and Engines 9, 20, and 17 were quickly on the ground with Trucks 9 and 6. The building was a mass of flame when they arrived, and a second alarm brought Trucks 1 and 8, with Engines 31, 13, 12, 15, and 7. Finally, as the building was surrounded by other buildings so that the whole block was threatened with destruction, a third alarm was sent out, bringing Engines 27, 25, and 30, and Truck 10. The building was, in 1850, a sawmill, and the lots now occupied by the machine shops on Elizabeth street were a lumber yard. It was fifty feet front and thirty feet deep. It was so old and shaky that the firemen were in momentary danger of losing their lives. The Inspectors of Buildings long ago condemned it, and fire insurance companies made their own prices for risks in it.

The firemen's ingenuity was taxed to get at the flames. The tenants in the houses had to get out of their rooms so quickly that many of them lost all of their property by smoke and water. Firemen took possession of these rooms, and poked their hose through the windows looking toward the mass of flame. Other hose were pulled to the top of the adjacent buildings. In the space between the Elizabeth street building and the rear burning building were stalled together Foreman Hannon and his men of Engine 12, Foreman Erb and his men of Engine 9, and Foreman Bradley and his men of Engine 31. Most of these were on the wooden bridge, fifty feet long and eight feet wide, covered with tarred paper, that was the only means of reaching the rear building from Elizabeth street. The walls of the building were trembling, ready to fall. Foreman Erb took his men and their pipe to the top of the building next toward the south. They who remained were on the bridge, and behind the burning building. The walls trembled again, and a mass of brick and mortar crumbled like cigar ashes from the top of the wall directly above them. They were warned by a cry, and they jumped back just in time to escape. The rubbish came down like a hail storm. Then the whole building fell suddenly with a crash, while the walls fell outward. The firemen dropped their hose just in time to save their lives. Some lost their hats.

Among the families in the tenements on Mott street, in whose rear this fire was, the greatest confusion reigned. The tenants crowded each other on the stairs with pieces of furniture that they were trying to save. Capt. Brogan of the Fourteenth precinct sent a squad of policemen, who restored order. After the burning building had fallen, fire in the tenement house, but it was extinguished.

A tank of acid for pickling iron after it is cast flamed up after the building had collapsed, and the flame, without sound, rose to a great height. A cupola of heavy No. 8 sheet-iron surrounded the tank, projecting through the roof of the building, and projected fifteen feet or more above the lofty roof. When the building fell the cupola crushed against the rear of the building on Elizabeth street, and tore an enormous rent in the wall.

The losses are: On the first floor—Aug. Mietz, iron castings and foundry, $4,000; insured. Second floor—Fowler & Rockwell, baker's machinery, $1,500, uninsured, and A. Mahoney, machinist, $1,500, uninsured. Third floor—N. Erlandsen, machinist, $1,000. Fourth floor—E. Hammerstein, leather carpet manufactory, $500, uninsured, and William W. Houghin, machinist, $5,000, uninsured. Fifth floor—Wm. Heneien and Erlandsen, machists. J. B. Radley owned the building and leased it to Johnson Brothers of 215 and 217 Grand street, who owned the boiler and engine in the basement. The building was fully insured for $8,000, and Johnson Brothers' machinery partly insured for $15,000. The building on Elizabeth street sustains a damage of $500. It is owned by A. Birtz, and is full of machine shops. Fowler & Rockwell's loss falls on their partner, manufacturer, $500
